

Mobile Intervention Through Mobile-health Technology

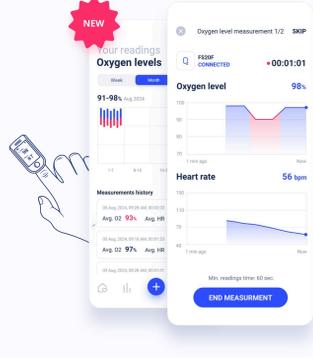

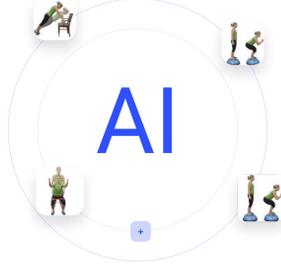

Empowering you to create and share mobile interventions for seamless home-based and hybrid care management.

Approach:
Build & share mobile interventions, track your Client's progress and provide feedback

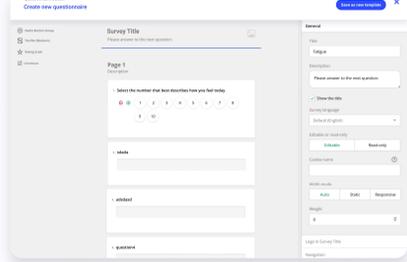

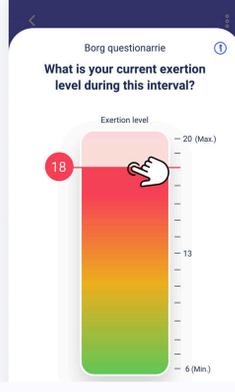

Keep Clients healthy between medical visits by the guidance of accessing your clinic at home

AI adjustments:
Dynamic Adjustment of Mobile Interventions Powered by AI

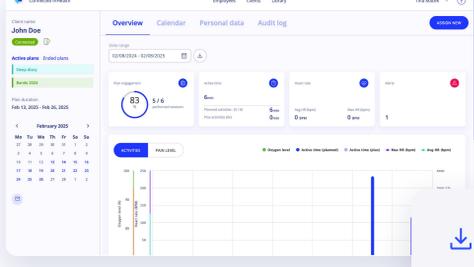

SpO2:
A Comprehensive Solution for Chronic Lung Disease Management

Borg Scale:
Borg Scale (RPE) Integration to Elevate User Experience and Precision Monitoring

Questionnaire builder:
The questionnaire builder enables daily or weekly feedback tracking, capturing feelings or objective data for general and research purposes

User engagement:
The average duration of user engagement using the Connected mHealth platform is 111 days

Export:
Data Export Ready – Perfect for Studies and Clinical Analytics

RPE Codes: Streamlined Revenue Opportunities and Billing

Connected mHealth helps clinics maximize revenue by enabling billing (RPM Codes) for remote monitoring and missed appointments. The platform organizes patient data for easy documentation, reporting, and efficient billing of remote rehab services.

Make it your own:
